-!-FUNCTION: MEDIATES THE ENDOCYTOSIS OF GLYCOPROTEINS BY MACROPHAGES, IN SEVERAL RECOGNITION AND UPTAKE PROCESSES.

-!-SUBCELLULAR LOCATION: Type I membrane protein.

-!-MISCELLULAR LOCATION: Type I membrane protein.

-!-MISCELLULAR LOCATION: Type I membrane protein.

-!-MISCELLULAR ENDOCATION: Type I membrane protein.

-!-MISCELLULAR ENDOCATION: Type I membrane protein.

-!-MISCELLULAR ENDOCATION: Type I membrane protein.

-!-MINTARITY: Contains 8 C-type lectin family domains.

-!-SIMILARITY: Contains 1 rich B-type lectin domain.

-!-SIMILARITY: Contains 1 rich B-type lectin domain.

Biophys. Acta 1075:248-258(1991).

-!- FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TISSUB SPECIFICITY: Cerebral white matter. Vo and V1 are expressed in the central nervous system, and in a number of mesenchymal and epithelial tissues; the major isoform v2 is restricted to the central nervous system.

DEVELOPMENTAL STAGE: Disappears after the cartilage development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SEQUENCE OF 21-53; 78-96; 226-250; 262-277; 295-306; 314-324; 329-331

"The neuronal chondroitin sulfate proteoglycan neurocan binds to the
neural cell adhesion molecules Ng-CAM/L1/NILE and N-CAM, and inhibits
neuronal adhesion and neurite outgrowth.";
J. Cell Biol. 125:669-680(1994).
-:-FUNCTION: May modulate neuronal adhesion and neurite growth during
development by binding to neural cell adhesion molecules (NG-CAM
and N-CAM). Chondroitin sulfate proteoglycan; binds to hyaluronic

Blomberg L.A., Chan W.-Y., Clerch L., Massaro D.;
"Molecular cloning and characterization of two developmentally regulated genes in rat lung.";
Submitted (SEP-2000) to the EMBL/Genank/DDBJ databases.
-!- FUNCTION: May play a role in intercellular matrix. May take part in the regulation of cell with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
-!- SUBCELLULAR LOCATION: Secreted; extracellular matrix.
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (By Similarity).

TISSUB SPECIFICITY: V2 is found only in brain.
DEVELOPMENTAL STAGE: Disappears after the cartilage development.
SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
SIMILARITY: Contains 2 ink domains.
SIMILARITY: Contains 2 ESF-like domains.
SIMILARITY: Contains 1 C-type lectin family domain.
SIMILARITY: Contains 1 C-type lectin family domain.
SIMILARITY: Contains 1 Sushi (SCR) domain.
SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.

-1-TISSUE SPECIFICITY: Cerebral white matter. VO and VI is expressed in normal brain, gliomas, medulloblastomas, schwannomas, neurofibromas, and menningiomas; v2 is restricted to normal brain and gliomas; v3 is found in all these tissues except medulloblastomas.

-1- DEVELOPMENTAL STAGE: Disappears after the cartilage development.
-1- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-1- SIMILARITY: Contains 2 link domains.
-1- SIMILARITY: Contains 1 C-type lectin family domain.
-1- SIMILARITY: Contains 1 Subhi (SCR) domain.
-1- SIMILARITY: Contains 1 Subhi (SCR) domain.
-1- SIMILARITY: DELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                               -1- SUBUXT: Interacts with FBLN1 (By similarity).
-1- SUBUXT: Interacts with FBLN1 (By similarity).
-1- SUBCELLULAR LOCATION: Secreted; extracellular matrix.
-1- ALTERNATIVE PRODUCTS:
Evente-Alternative splicing; Named isoforms=5;
Comment-Additional isoforms seem to exist;

Medlecular and cellular properties of the rat A44 antigen, a C-type lectin-like receptor with structural homology to thrombomodulin.";

J. Biol. Chem. 275:34382-34392(2000).

-I- FUNCTION: Receptor (or element of a larger receptor complex) for Clq, mannose-binding lectin (MBL2) and pulmonary surfactant protein A (SPA). May mediate the enhancement of phagocytosis in monocytes and macrophages upon interaction with soluble defense collagens. May play a role in intercellular adhesion.

-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- TISSUE SPECIFICITY: Widely expressed in lung and heart. Expressed at lower level in brain, thymus, liver, spleen, intestine, kidney, adrenal gland, muscle and testis. Expressed on circulating natural killer cells.

-I- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. -1- FUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR MATRIX OF CARTILAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION. MAY PLAY A REGULATORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.

-1- SUBCELLULAR LOCATION: Secreted; extracellular matrix (By

DOMAIN: TWO GLOBULAR DOMAINS, G1 AND G2, COMPRISE THE AMINO
TERMINUS OF THE PROTEOGLYCAN, WHILE ANOTHER GLOBULAR REGION,
MAKES UP THE C-TERMINUS. G1 CONTAINS LINK DOMAINS AND THUS
CONSISTS OF THREE DISULFIDE-BONDED LOOP STRUCTURES DESIGNATED AS
THE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULFATE (KS)
AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LIE BETWEEN G2
AND G3.
                                                                                                                                                                                                    -!- PTM: CONTAINS MOSTLY CHONDROITIN SULFATE, BUT ALSO N-LINKED AND O-LINKED (ABOUT 40) OLIGOSACCHARIDES.
-!- PTM: THE KERATAN SULFATE CONTENTS DIFFER CONSIDERABLY BETWEEN ADULT AND FETAL BOVINE PROTSOGLYCANS.
-!- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-!- SIMILARITY: Contains 1 EGF-like domain.
-!- SIMILARITY: Contains 1 C-type lectin family domain.
-!- SIMILARITY: Contains 1 Sushi (SCR) domain.
-!- SIMILARITY: Contains 1 Sushi (SCR) domain.
-!- SIMILARITY: Contains 1 Sushi (SCR) domain.

DOMAIN: TWO GLOBULAR DOMAINS. GI AND G2, COMPRISE THE AMINO DOMAIN: TWO CLOBULAR REGION, G3, MAKES UP THE COOH TERMINUS. GI CONTAINS LINK DOMAINS AND THUS CONSISTS OF THREE DISULFIDE-BONDED LOOP STRUCTURES DESIGNATED AS THE A, B, B' MOTIFS. G2 IS SIMILAR TO G1. THE KERATAN SULFATE (KS) AND THE CHONDROITIN SULFATE (CS) ATTACHMENT DOMAINS LE BETWEEN G2 AND G3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CONTAINS MOSTLY CHONDROITIN SULFATE, BUT ALSO KERATAN SULFATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MALTIX BIO1. 14:323-328(1994).

-I-FUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF EXTRACELLULAR MATRIX OF CARTLIAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTLIAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION.

-I-SUBUNIT: Interacts with FBLN1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CHAINS, N-LINED AND C-LINED OLICOSACCHARIDES.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Molecule type: protein
A;Residues: 25-145, K',147-162 <MUR>
A;Rote: 146-Arg was also found
C;Comment: This galactose-binding lectin is isolated from the coelomic fluid.
C;Comment: This protein plays important roles in defense mechanisms and in development C;Comment: The molecule is a tetramer of identical chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Cross-references: DDBJ:D13299
